GROUNDING (Festival) in the Otways

The Upper Barwon Landcare Network works on the lands, waters and seas of the Wadawurrung People of the Kulin Nation and the Gulidjan and Gadubanud People of the Maar Nation and acknowledge them as the Traditional Owners. We pay our respects to their elders past, present and emerging.

We acknowledge that the Traditional Custodians have been a part of this land for at least sixty-five millennia and that all Australians can learn from their stewardship.

We believe that the descendants of those Traditional Custodians should be consulted respectfully on matters that affect their culture and wellbeing

LANDCARE IN THE UPPER BARWON REGION

Supporting the areas of:

Bambra, Barwon Downs, Birregurra, Deans Marsh, Eurack, Forrest, Gerangamete, Gherang, Irrewarra, Murroon, Ombersley, Pennyroyal, Wurdale, Wensleydale, Winchelsea, Wurdiboluc and Yeodene

GROUND^{ED} in the Otways — Growing Ideas, Relationships and Resilience

Ellen Whitten

A gathering grounded in landscape, learning and community, celebrating the people, practices and partnerships nurturing a thriving and resilient regional future.

More than 750 people gathered at Yan Yan Gurt West Farm for the GROUNDED Festival, a two-day event focused on sustainable agriculture, climate resilience and community connection.

Set beneath the eucalyptus trees, the site was transformed into a village of marquees, tents, fire drums and shared spaces that encouraged conversation and collaboration.

The festival opened with a community dinner and attendees were formally welcomed the following morning by the Stewart family and GROUNDED team, and a smoking ceremony.

Event goers travelled from across Victoria and interstate, including Queensland, Western Australia and Tasmania. The diverse gathering included farmers, researchers, scientists, educators, chefs, community groups and families, all engaging in discussions about food systems, farming and sustainability.

A key highlight was the launch of the Upper Barwon Landcare Network's "Leading Farmer Adoption of Sustainable Agriculture for Climate Resilience" project. The session introduced a five day Resilient Farming Course and educator training program to be delivered across four regional Landcare networks, attracting strong interest from local farm businesses.

Key themes included sustainable farming practices, succession planning, farmer wellbeing, ecological land management and strengthening connections between people and place. There was also a strong emphasis on Indigenous knowledge and collaboration across generations and sectors.

Sustainability was powerfully demonstrated at the festival through practical measures such as reusable tableware systems and reduced waste on site.

Some stat's from the 2 day event:

58 tent sessions • 23 demos and workshops • 5 farm tours • 73 speakers • 7 tent facilitators • 27 exhibitors • 4,644 dishes washed by B-Alternative • 50 volunteers • over 751 people onsite • 209 people at the opening night dinner • 8 food and drink vendors • 178 people attended 5 farm tours • 150 onsite campers including 42 glamping tents.

Recordings of sessions are also now available at the [GROUND^{ED} Podcast channel](#) if you missed out on attending or couldn't be in two tents at once if you were there!

We want to shout out a great big thank you to - our community - with a special shout out to the local Landcare volunteers that manned the UBLN Landcare in the Corangamite Region Tent, other volunteers, Landcare Networks, the Stewart family and the GROUNDED team for creating and bringing to life such an inspiring event that fostered learning and collaboration towards a climate resilient future for all of us.

The Resilient Farming Course, Sustainable Agriculture Educator training position and peer group mentoring areas of the FASA project are now rolling out with the first days of the training course happening in August. The Upper Barwon area is an exciting place to live and work - full of hope and possibility!

UBLN 2026 ANNUAL DINNER & AGM

and opportunities for building pollination security

Ellen Whitten

Upper Barwon Landcare Network held it's AGM in the cosy quarters of the Birregurra Bowling Club on Monday evening.

Jackie Dullard (Irrewarra) stood down as President after 6 wonderful years and gave a gracious farewell to our "vibrant, pulsing organisation" and her hope for us to "continue to grow in leaps and bounds into the future" thank you for all the guidance and support you have contributed to the network Jackie.

Mary Dracup (Gerangamete Forrest) has stepped into the President position - we are looking forward to your unique perspective and experience and to what the future holds, welcome Mary.

Bruce Bilney (Irrewarra) will continue on as Treasurer - thank you for your continuing efforts and consistent advice Bruce.

Thank you to all the dedicated and hard-working Landcare volunteers that attended as well as those from partner organisations including Barwon Water the Corangamite Catchment Management Authority and Colac Otway Shire Council — it was awesome to see all the different folk engaged in thoughtful conversations in the room and across the tables.

Fiona Chambers of Wheen Bee Foundation gave a very informative and at times confronting presentation about the introduced honeybee in Australia and the almost invisible role it plays in pollinating much of our domestic fruit, vegetables, crops and pasture.

She went on to explain how the flow on effect of the invasion of the varroa mite (a parasitic mite that feeds on honey bees and their larvae weakening and then eventually killing colonies) will significantly affect our pollination security and in turn severely impact our food security.

Fiona then introduced us to some of our native pollinators (including native bees and other insects) that are unimpacted by the varroa mite and explained ways we can support and encourage them to be a larger part of our farming ecosystem as a way to prepare and build resiliency in the face of the dramatic decrease in honeybee population that is forecast to happen within the next 2 years.

A very generous, hearty and tasty dinner was enjoyed by all thanks to Maryanne and Amanda from Birre Grocer, together with beautiful native floral displays including the cuddly possum tail Banksia (*Banksia baueri*) grown and arranged by Jill Stewart from Yan Yan Gurt West Farm.

Another great big thank you to Graham Brien for the use of the Bowling Club and for manning the bar.

Our region is an exciting place to be right now to witness and be a part of traditional farming evolving to meet a changing climate - a sincere thank you to every passionate and hard-working person who plays their part.

More information about Australia's new National Pollination Strategy is in the next article - page [14](#)

NEW NATIONAL POLLINATION REPORT AND CONSULTATION NOW OPEN

The first Australian *Pollination Security Status Report 2026* has been released and is open for nationwide consultation.

UBLN had the privilege of hosting Fiona Chambers (CEO Wheen Bee Foundation) as the guest speaker at our Annual Dinner and AGM recently where she spoke about this report. Find out more information and how you can contribute to developing a strategy below:

Australia's first Pollination Security Status Report 2026 has been released, providing a national assessment of pollination security across agriculture, ecosystems, biodiversity and socio-cultural values.

The report establishes a baseline for how Australia's pollination system is changing over time, drawing on new modelling, economic analysis and industry data.

Some key findings include:

- Threats to pollination include habitat loss, climate change, land use change, pests and diseases, severe weather events, altered flowering patterns and other environmental stressors. These are compounded by structural pressures within the commercial beekeeping industry, including labour shortages, an ageing workforce, rising biosecurity requirements, imported adulterated honey and increasing varroa management costs.

- New modelling suggests Australia's pollination system could face a potential shortfall of approximately 290,000 commercial honey bee hives during peak pollination periods under most likely future scenarios.
- Pollination security affects more than agriculture. It underpins food production, biodiversity, ecosystems and socio-cultural values.
- Pollination plays a vital role throughout Australia, supporting communities, diets, cultural practices, ecotourism and natural landscapes. It underpins everyday life in ways that are often unseen, yet essential. Many of these realities are difficult to quantify and are often undervalued.
- Australia lacks coordinated national monitoring systems for pollinators and pollination services. Significant knowledge gaps remain around feral honey bees, native pollinators and the broader impacts of pollinator decline.

The report will now inform the development of the Australian Pollination Strategy, which is entering its national consultation phase.

The Australian Pollination Strategy team is inviting input from everyone involved in pollination to help test findings, identify gaps and shape future priorities.

Barwon Water Aqueduct Community Day

Barwon Asset Solutions

Join us for a special community event to experience and reflect on the history of the Barwon River Ovoid Sewer Aqueduct before its removal.

The event will be held on **Saturday 1 August, from 10 am to 2 pm**, with activities based at the **Barwon Asset Solutions (BAS) Depot, 18 Kadak Place, Breakwater**. Community members can book a guided bus tour to view the Aqueduct up close or visit a free onsite information and display area at the depot, featuring historical material, project information, and opportunities to speak with staff. The event is part of Barwon Water's commitment to recognising the Aqueduct's heritage while preparing for its safe removal.

13

More information, to register and book tickets follow the link: <https://events.humanitix.com/barwon-water-aqueduct-community-day>

Vic Landcare Forum Vic Landcare Awards 40 Years of Landcare

The **Victorian Landcare Forum** is being held from **Monday, 31 August** to **Wednesday, 2 September**, at the Cardinia Cultural Centre in Pakenham.

More information and tickets available at link: [Vic Landcare Forum](#)

Landcare Awards — nominations closing soon

If you know an individual, group or organisation making a real impact, nominate them today before it's too late. Get your nomination in today via the [Landcare Australia website](#). **Nominations close 31 July.**

Save the date: Landcare Awards/40-year celebration

The Victorian Landcare Awards ceremony and 40 Years of Landcare celebration will be held on **Thursday, 15 October** at ACMI in Federation Square, Melbourne. Keep an eye on Landcare Victoria's newsletter and social media to stay up to date with more announcements around this event.

**** Upper Barwon area Landcare volunteers who wish to attend - please get in touch with Andrea Montgomery (Landcare Facilitator) as there is some funding available to support this**

Dung Beetle presentation by Tom O'Malley

Sustainable Agriculture Facilitator with Cradle Coast NRM based in northwest Tassie.

When: **10am Tuesday 21st July** via Microsoft Teams

- Dung beetle nurseries and breeding
- Interstate dung beetle swaps
- Dung beetle species introduction and reintroductions
- Biology and lifecycle
- Bridging seasonal gaps
- Question time will follow

Presented as part of the Dung Beetles in SE Aust Community of Practice — all welcome, please email karen.okeefe@ccma.vic.gov.au if you would like to be added to the invitation for this session and our quarterly online meetings.

BIRREGURRA LANDCARE GROUP - update

Russell Garraway

Birregurra Landcare Group Update - March 2026

Go for a walk. Take in our beautiful town. This is because residents and volunteers work hard to develop their lovely gardens and public areas. Our group aims to help support this beauty with an emphasis on environmental improvement and sustainability.

During March the Landcare group has been busy with endless weeding to get ahead of the Autumn growth spurt when good rain arrives. The area along the heritage trail, from the Golf Club to Skene St has received most of our attention, even though the weedless horizon always seems so far away. Main Street plant beds also received our attention with a much-needed weeding and tidying. Whilst this activity is a small part of our responsibility, we think it is uplifting to nicely present the centre of the town we all love.

We had our first display at the April market where a range of aerial photographs showed the various areas where we continue our planting and maintenance efforts. Also available for sale were a few plants, and hats with our lovely Spotted Pardalote emblem. A range of pamphlets were available about planting and care of native vegetation.

Some customers enquired about farm planting, and we were able to refer them to the UBLN office for further advice. Pleasingly, we also signed up a few new members. We will continue to attend the markets and look forward to discussing our activities with residents and visitors.

During this month, Upper Barwon Landcare Network (UBLN) Office arranged an Annual Planning and Social meeting at Forrest, hosted by the Forrest and Gerangamete Landcare group. Birregurra was represented and we had the opportunity to discuss projects with others on our network.

As we mentioned in the last report, our efforts involve a lot more environmental work than weeding. A photo here shows ongoing work at the river to locate and eradicate blackberry regrowth. This, and control of other weed infestation, is very important environmental work near our waterways requiring our continuous attention.

Of course, our group is not all about hard labor. A cuppa and a laugh or two afterwards is most important. We will welcome any interested new members. More news soon.

BIRREGURRA LANDCARE GROUP - update

Russell Garraway

Birregurra Landcare Group Update - April 2026

During April the Landcare group has been busy as always. The main project was to plant succulents on the slope below the Niagara Hill. (see the Niagara location on BLC Facebook page). Instead of a relatively bare patch which including many weeds, we will soon have a weed free slope filled with colour. This will be in full view from the Heritage Trail looking south from the Golf Club vicinity. Unfinished Main Street plant beds were also given a final weed and tidy.

Our group does a lot of new planting, particularly along the Waterways and the Heritage Trail. One might wonder where we buy our plant stock. Well, we don't. Some plants are kindly donated by members of our Group and Birregurra Community members from their own gardens. Others have come from Corangamite Catchment Management Authority and through grants from Colac Otway Shire.

However, most of our plants are produced in our own nursery. Many seeds are collected from native plants already growing in our area and carefully nurtured in seed beds and pots to maturity ready for planting. Others are propagated from cuttings.

Our Nursery enclosure was built by our member Ian Fox and is managed by Andrus Osenieks. Here seeds and cuttings are given daily care and repotted until they are ready for planting in areas selected for improvement and beautification. We continue this work to prevent damaging weed growth and provide environmental health. Until next time, please pray for Autumn rain.

BIRREGURRA LANDCARE GROUP - update

Russell Garraway

Birregurra Landcare Group Update - May 2026

During May the Birregurra Landcare group was able to welcome a sprinkle of rain, enough to settle the dust and help establish some new plantings. Hoorah!

Maintenance of the native plantings along the river showed that trees, shrubs and grasses had survived the drought well. We conducted a general tidy-up of the area and removed redundant tree guards and stakes. Further work will be required before winter rain brings up the water level.

This month our efforts concentrated on the area termed the Frog Pond, and weeding/planting on the heritage trail below St Peter's Church. Plantings included donated Lomandra and Agaves. This work also included cutting up and removal of a wattle tree that had fallen across the walking path and trimming of low hanging foliage.

Work continues along the Atkin Creek, in the area along Scouller St to the Barwon River, where a long-term project has seen extensive restoration and tree planting in an area that had become derelict. More on that project will be highlighted in our report next month.

Good attendance and enthusiasm on our recent foggy and drizzly morning speaks well for the commitment of our members during the forthcoming winter. What else would we expect from Birregurra Volunteers?

Finding out what's going on with our river

Mary Dracup

Forrest hosted a rare environmental good news session in mid-June, when Gerangamete Forrest Landcare Group co-hosted a 'What's going on with our river?' update event with Corangamite Catchment Management Authority (CMA) and Barwon Water.

I was one of around 40 locals, Landcarers and river enthusiasts who heard from CMA and Barwon Water managers how long stretches of river in the Upper Barwon region that flows through Forrest to Birregurra are being rehabilitated. Endangered little galaxias fish and platypus are returning to their historical sites and river flow and quality is improving.

We learned the changes were due to six out of eight major clusters of choke points created by willows and glyceria weed grass having been cleared and fenced from stock as part of the CMA's Barwon Flagship Project. The works look like bomb sites at first, and landowners and managers do need to 'hold their nerve' and manage weeds until the native revegetation grows to create shade.

We also learned that managing the transition to a healthier river while some choke points remain is tricky. Releasing the 1000 megalitres (average) of 'environmental water' allocation that is held in the West Barwon Reservoir for when natural flows slow can re-inundate some pieces of swamp-turned-farmland. The river can also sometimes find alternative pathways on its own. For some farmers a periodic influx of fertile river silt is a bonus but every property is different and negotiations are ongoing.

The experts' presentations were jam-packed with analysis and research, and the following panel Q&A session gave the audience a chance to question not only presenters, Landcare and Friends of the Barwon representatives, but also the CEOs of Corangamite CMA, Amber Clarke, and Barwon Water, Sean Cumming. Information and insights flowed freely and by the end I think it was plain that the agencies, Landcarers and river advocates shared similar goals and concerns around how to rehabilitate our rivers in the face of the declining rainfall. A key message was to clear the remaining choke points.

We were well due for some fresh air as we headed out to visit a rehabilitated stretch of the West Barwon at Boundary Road. Despite the rain, we were able to see the results of willow removal works at a previous river choke point.

Gerangamete Forrest Landcare members had cooked us a warming BBQ lunch by the time we returned, and we had a chance for more informal chats and information sharing with the experts as we munched. On the whole, finding out what was going on with our river sparked a surprisingly positive conversation.

Ekidna Tree Guards - still available

ekidnaTM
TREE GUARD

A pallet full of these spiky metal mesh paddock tree guards are available for purchase through the UBLN at a wholesale cost for Landcare members.

Ekidna Tree Guard is based in the Hunter Valley, NSW and have proven to be a simple to install and economic way to protect paddock trees as they establish while the paddocks are stocked.

They come in 2 sizes, large (for cattle) and small (for sheep) and can be purchased from us at a rate of \$29/large and \$22/small.

Contact us if you are interested in purchasing some and trying them out.

More information including specifications can be found in the [brochure](#)
